

Coding & Solution

Date	06 July 2026
Team ID	
Project Name	Smart Lender - Loan Eligibility Prediction System
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	(Paste your GitHub link here)
Programming Language(s)	Python [e.g., Python, JavaScript, Java]
Framework(s) Used	Streamlit, Scikit-learn, Pandas, NumPy [e.g., Flask, React, Spring Boot]
Key Features Implemented	Loan eligibility prediction, user input form, data preprocessing, trained ML model, instant prediction results, simple user interface
Pending / Incomplete Features	Database integration, user login, loan history tracking, model optimization
Setup / Run Instructions	Install required libraries (pip install -r requirements.txt) and run streamlit run app.py.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	No

Additional Notes / Comments:

The project successfully predicts loan eligibility using a Machine Learning model. The application is user-friendly, provides quick prediction results, and follows clean coding practices.
